JA-SIG Conferences : uP101 Vancouver Channels

This page last changed on Jun 02, 2006 by awp9.

Great! We've got a portal. Let's put some content in it.

IChannel

IChannel is the interface for channels.

Examine a simple channel.

Channel types

Review available channel types.

Channel Manager user interface

Walkthrough.

Channel publishing and XML channel definitions

Alternatives to using the web interface.

Mention of the larger considerations of versioning XML documents in CVS versus keeping your portal configuration in the DB.

Channel Publishing Documents and channel types

There's more to channels than the Java.

Portlet support

Support for JSR-168 portlets.

WSRP

Partial support. Clearly feasible. Have this requirement? Have some resources to get involved?

Use of IPerson and proxy CAS

This gets at accessing services from channels.
